Didier MOREL, Data Scientist @ BD

UNIVERSITÉ

Grenoble Alpes

- Becton, Dickinson and Company is an American medical technology company
- Offers innovative solutions

#### BD's workflow and our integration

#### ML and healthcare industry

"Machine learning is swiftly infiltrating many areas within the healthcare industry, from diagnosis and prognosis to drug development and epidemiology, with significant potential to transform the medical landscape." © nature.com

## Presentation of the application

Develop a Shiny application to test and compare ML algorithms on any kind of dataset

Organization

#### Issues

- Extract the data from its source (.txt, .csv, Excel, etc.)
  - Different code for each format
- Identify the type of each variable
  - Can be long to do that manually for a large dataset with lots of variables
- Manage missing values
  - Several methods exist to deal with missing values

UNIVERSITÉ

Grenoble Alnes

- Select ML algorithm and his settings (called hyperparameters)
  - Many differents ML methods exist
  - Often, we don't know which algorithm to choose until we test some of them
- Launch the training phase
  - Can be long and it takes time if we test different ML methods with different hyperparameters
- Analyze the quality of the model

Organization

#### The need

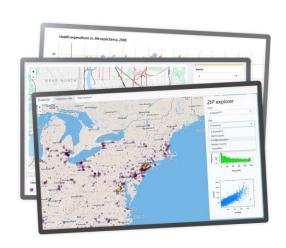

- A graphical interface: the user doesn't need to code
- Flexible way to:
  - Import data and to do the data preprocessing
  - Select the method to deal with missing values
  - Identify each type of variable automatically
  - Choose ML algorithms and hyperparameters we want to test and compare
- Generate a quick analytical report of the results (with tables and graphics)

# Graphical interface with Shiny

Shiny is an R package that makes it easy to build interactive web apps straight from R.

Organization

Organization

# Algorithms used

- Machine Learning
- Selection of important variables
- Different algorithms
- Library caret

# Planning

- Analysis phase (functional) or design
- Implementation or programing phase
- Delivery phase

## Structure of app

ui.r server.r (Computing)

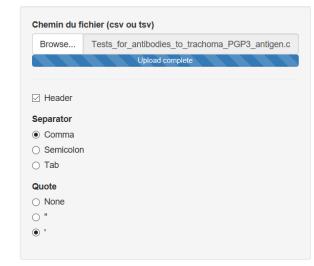

## Data uploading

- csv / tsv
- flexible
- First limit with big datasets

#### Tests algo
